Date: 10 August 2026

## TO WHOM IT MAY CONCERN

**Subject: Experience & Contribution Letter - [REDACTED] & Muhammad Muntazer Mehdi**

I am writing this letter to recognise the work of [REDACTED] and **Muhammad Muntazer Mehdi**, who built the complete digital platform for my practice, **MyHomeDoc Telehealth**, between 8 May 2026 and 10 August 2026.

When we started, MyHomeDoc had no online presence of its own. Over the course of the engagement, they took the project from an idea to a fully live service at **[www.myhomedoc.care](http://www.myhomedoc.care)** a modern website where our patients can learn about our services, book a same-day video visit, and pay online, along with an admin dashboard our team uses every day to manage appointments and patient messages.

[REDACTED] led the project as **Project Manager & Project Lead**. She handled the planning, gathered our requirements, kept every revision on track, and was my main point of contact from the first call to the final launch. **Muhammad Muntazer Mehdi** worked under her leadership as the **Lead Developer (Full-Stack)** and built the entire platform himself the website, the booking and payment system, the admin dashboard, the database, the email systems, and the final migration of our domain to the live site, which he completed without any disruption to our existing email.

What stood out to me most was how they worked. Every change I asked for and there were many, from small wording tweaks to replacing images and restructuring pages was handled quickly and exactly as requested. They explained technical decisions in plain language, flagged risks before making changes, and tested everything before telling me it was done. The project was delivered on time and the site has been running smoothly since launch.

MYHOMEDOC | TEXAS  
Trusted Care for a Healthier Tomorrow

[care@myhomedoc.care](mailto:care@myhomedoc.care)

I am happy to recommend both of them without reservation. A detailed description of the project is attached in Annexure A, and I am glad to verify anything in this letter please feel free to contact me at the details below.

Sincerely,

**Dr. Yasir Ahmed**

Medical Director, MyHomeDoc Telehealth

## ANNEXURE A - PROJECT DETAILS

Delivered by [REDACTED] (Project Manager & Project Lead) and Muhammad Muntazer Mehdi (Lead Developer).

### MyHomeDoc Telehealth - [www.myhomedoc.care](http://www.myhomedoc.care)

MyHomeDoc is a telehealth and virtual primary-care practice serving patients across Texas. The team designed and built its complete digital platform with Next.js, deployed on Vercel covering everything from the public website to the internal tools the practice runs on.

**Patient-Facing Website:** A fully responsive, multi-page website presenting the practice's eleven service lines (telemedicine, primary care, mental health, weight loss, chronic-disease management, and more), pricing plans, provider profiles, patient testimonials, locations, and a health blog all designed around a clean, patient-friendly experience.

**Online Booking & Payments:** A live appointment-booking system showing real-time availability, integrated with Stripe for secure per-visit, monthly-membership, and family-plan payments.

**Admin Dashboard:** A secure portal where the practice manages appointments, weekly availability, blocked time slots, inbound patient messages, and published reviews.

**Content Management:** A headless CMS (Sanity) powering the blog and testimonials, so the practice can publish and edit content without needing a developer. Patient and appointment data is stored securely in a Supabase database.

**Automated Email:** Branded transactional emails (Resend) for contact-form notifications, booking confirmations, and automatic patient reply confirmations sent from the practice's own verified domain.

**Infrastructure, Security & Launch:** Cloud hosting with continuous deployment on Vercel, HTTPS throughout, and search-engine optimisation (XML sitemap, structured data, canonical URLs, and social-preview metadata). The launch included a full domain and DNS migration onto myhomedoc.care, planned and executed so that the practice's existing Google Workspace email continued working with zero downtime.
