

Muhammad Muntazer Mehdi

Full-Stack Software Engineer

Madinah, Saudi Arabia · Transferable Iqama · Open to new roles

+966 57 217 6326 · muntazer.mehdi.rizvi@gmail.com · muntazermehdi.com · linkedin.com/in/m-muntazer-mehdi

Full-Stack Software Engineer working across web, mobile, backend, and applied AI. Since 2023, I have delivered **20 products end to end**, from requirements and architecture through development, app-store release, and production support, including projects where I was the **sole engineer**. Recent work includes a live telehealth platform serving patients across Texas, a bilingual React Native marketplace with Urdu message parsing, and an AI governance suite aligned with the **EU AI Act and ISO/IEC 42001**.

Education

National University of Computer & Emerging Sciences (FAST-NUCES) Bachelor of Science (Software Engineering) UET-ECAT 2020: ranked 156 nationally	2020 – 2024
Kips College FSc Pre-engineering	2018 – 2020

Experience

Feenix (via Skyline Digitals) · Contract Lead Developer, Full-Stack & Mobile Sole developer across Feenix's web, mobile and backend products. • GVRN: AI governance workspace for RICS-regulated firms. 12 registers on an append-only audit trail, 17 generated documents, 5 roles, mapped clause-by-clause to RICS, the EU AI Act and ISO/IEC 42001. • Responsible with AI: live B2B microlearning platform. 3 courses, 24 modules, 360 narration clips, 19-language localisation, Stripe billing. Extended with a per-organisation course engine, and an accessibility system where 28 Playwright specs gate CI and a contrast regression fails the build. • Roley: iOS and Android AI tool recommender. 7-stage prompt pipeline, 5 ranking dimensions. Live on the App Store and Google Play. • MeetMyPro: services marketplace across mobile, API and web. 14-state booking lifecycle with held, released, refunded and partial settlement.	London, UK · Remote December 2025 – Present
MyHomeDoc Telehealth · Contract Lead Developer, Full-Stack Sole engineer on the practice's full platform, from no online presence to a live service generating \$3,000 per month . Concurrent with the Feenix engagement. • Booking across 12 service lines. Availability computed per request, not stored; double-booking prevented by a database constraint. • Stripe payments with a signature-verified webhook and idempotent success write. • Admin console and headless CMS so staff publish without a developer.	Texas, USA · Remote May 2026 – August 2026
Alliance Tech Pvt Ltd · Contract Senior Full-Stack Software Engineer Owned architecture and system design across client products, with end-to-end delivery responsibility. • PakRiceMarket: sole full-stack engineer on a live React Native marketplace digitising Pakistan's rice trade. 2,000+ downloads in the first 15 days. Urdu and English without a restart, voice-first listings for a low-literacy user base, 4 market roles, 7 chat types, real-time bidding, AI extraction of Urdu price messages, and a web admin platform. Live on the App Store, Google Play and pakricemarket.com. • ARGear: real-time AR camera. 4 effect families across 2 native render paths, with the render loop kept off the JS thread. • Yo.Works: video-first talent marketplace. Match score over 4 weighted signals against a 50-point threshold, Italian-first bilingual, chat without a socket tier. • BackPack Buddies: cross-platform social travel app. One codebase to 2 stores, 6 message types, 4 server-side notification triggers on database writes. • Kora: React Native frontend for a freelance marketplace. Role-based onboarding, payments, real-time chat, and a UX and scope overhaul for the Swedish market.	Remote April 2025 – December 2025

- **Contractly:** contract lifecycle management platform with a modular, audit-ready architecture.

Full-Stack Software Engineer

September 2024 – March 2025

Delivered client-facing web and mobile products to defined timelines.

- **Meetwise:** autonomous AI meeting assistant. A headless browser joins the call, captures audio, and hands a clean recording to Whisper for transcription and Gemini for summarisation, producing 3 meeting outputs.

Promoted to Senior Full-Stack Software Engineer in April 2025.

Green Touch

UAE · Remote

React Developer

November 2024 – April 2025

Concurrent with the Alliance Tech engagement.

- **Omnigen.AI:** generative AI SaaS dashboard. 5 generators in one shell across 4 output types and 2 model providers, behind a server-enforced usage gate with the paywall built as a state machine rather than a page.
- **RAGnet:** social content automation on n8n, with an LLM agent and scrapers driving scheduled content generation.

Toptal

Remote

Full-Stack Developer

December 2023 – August 2024

- **ShipEase:** freight logistics platform delivered as three surfaces, a web console, a React Native app, and the API behind both.

National University of Computer & Emerging Sciences · Part-time

Pakistan · On-site

Teaching Assistant

August 2023 – January 2024

- Ran lab sessions for Database Systems and Software for Mobile Devices, mentoring students through project development and design reviews.

Selected Projects

QUIZiALL | Lead Developer

- Verified AI quiz engine across 5 categories: football, film, TV, music and kids' shows. Questions are generated, grounded and verified offline and stored before play, so no inference runs during a round.
- Facts proposed by a model are anchored against structured sources (Wikidata, TMDb, MusicBrainz, Fandom and Wikipedia infoboxes). Verification is a gate, not a prompt: a fact is accepted only if the answer appears on a real source page near the subject.
- Python engine with 688 offline tests and reproducible builds, exposed through a FastAPI backend with a SQLite-to-PostgreSQL importer and Alembic migrations. Generation costs under \$1 per topic.

ChatOn | Own product

- Reusable React Native messaging client built as a drop-in component, sold to two clients and integrated into their own applications.
- 1:1 and group messaging on Firebase Auth and Firestore, with media and voice messages, reactions, reply, forward, pin, edit, delete, message search, read receipts, typing indicators and presence.
- Offline-first: a local send queue and media cache keep the app usable on a dropped connection and reconcile when it returns.

Also delivered Feenix Observatory, Vidos Solutions and Feenix sites, and the Bespoke course engine. Full project index: muntazermehdi.com

Skills

- **Languages:** TypeScript, JavaScript, Python, Dart, Swift, Kotlin, SQL, HTML5, CSS3
- **Web:** React, Next.js, Tailwind, Material-UI, Bootstrap, Framer Motion, Vite
- **Mobile:** React Native, Flutter, native modules and JS bridges (Kotlin, Swift)
- **Backend:** Node.js, Express, NestJS, FastAPI, Laravel, REST APIs, serverless functions, authentication and authorisation (JWT, OAuth2, RBAC, row-level security)
- **Database:** PostgreSQL, Supabase, Firebase, MySQL, MongoDB, SQLite, Prisma, Alembic
- **AI:** OpenAI, Claude, Gemini, Whisper, Replicate, embeddings and retrieval, grounded generation and verification pipelines
- **Delivery:** cloud deployment on Vercel, Railway, Render, AWS (EC2, S3) and Firebase Cloud Functions; Docker, Git, CI/CD with GitHub Actions, automated testing (Jest, Playwright), Sentry
- **Foundations:** Java, C#, C++, data analysis (university, 2022 – 2024)
